

MD Success Story

Version Control and Software Change Management at GEODIS

“ESBD found us a product that meets our needs ...”

Jorge Antao, RSI Geodis Euromatic

Geodis Global Solutions is a division of the multimodal logistics company Geodis Group, which has a presence in 120 countries and more than 30,000 employees. Together, our business divisions strive to meet the objectives and expectations of customers across multiple sectors. A responsible company, Geodis ensures compliance with environmental regulations and is committed to sustainable development.

At our Euromatic Compans site, we have a team of three IBM i developers who use several tools for internal software development. It was time to consider implementation of change management software. Our main need was to standardize and secure test phases and moving software changes into production.

Criteria for selecting MDCMS

Our needs are relatively standard; we were looking for a simple but powerful and easy-to-implement solution. After reviewing the solutions available on the market, MDCMS from Midrange Dynamics quickly impressed us.

First, it took only three days for the consultant from ESBD (an MDCMS distributor) to achieve a convincing Proof of Concept and configure the solution to correspond to our environments and needs. The learning phase was then fast and very intuitive.

Moreover, MDCMS emerged as the solution with the best quality/price ratio on the market and a flexible sales model that adapts to our financial objectives.

Integration/Support

We were attracted by the simplicity of integrating MDCMS with our information systems and the minimal training required. In the rare cases where we needed support, we were satisfied with response and availability of the technical team. Our relationship with the ESBD consultants is professional and pleasant.

To summarize, MDCMS meets our needs perfectly. In fact, we have extended our supplier relationship to a partner relationship, agreeing to become the MDCMS pilot site for other units within the Geodis Group.
