

STANDGUARD ANTI-VIRUS for System i

<http://antivirus.bytware.com/i/>

Modern virus threats and malicious code

represent a major threat to your corporate data and security. Today's multi-platform networks, Internet connectivity, and mobile computing mean that your IBM server could be the host, source of infection, and/or potential target of an attack. StandGuard Anti-Virus, developed in cooperation with IBM and McAfee, provides native protection for your IBM servers running IBM i and Domino.

StandGuard Anti-Virus Technical Packet

<http://www.bytware.com/media/techpacks/av/download.html>

Viruses and IBM servers

- IBM i systems can host viruses.
- Only native scanning can find all viruses.
- Multiple OSes in partitions increases risk.
- Infected IBM systems may show no symptoms.

The Danger to Your Network

- Viruses on System i can attack other systems.
- IFS can be means of transmission.
- Undetected viruses can pass through IBM i mail.
- Virus impact can spread across OSes.

A Native Solution

- Solution written specifically for IBM i.
- Provides exclusive IBM i-only capabilities.
- Object Integrity Scanning protects OS objects.
- Supports native mail scanning.

Protection for Lotus Domino

- Optional add-on written natively for Domino.
- Real-time scanning of mail attachments.
- Supports Notes, SMTP, and MIME.
- Lotus Notes & web browser interfaces.

Powered by McAfee

- Utilizes McAfee's industry-leading engine.
- Heuristic scanning detects unknown viruses.
- Stops zero-day threats.
- Backed 365x24x7 by McAfee Avert® Labs.

Simple, Powerful Management

- Offers both green screen & GUI interfaces.
- Automatic update of DATs & engine.
- Manage all OSes from a single IBM i interface.
- Ties into your monitoring solution.

StandGuard Anti-Virus Technical Packet
<http://www.bytware.com/media/techpacks/av/download.html>

Viruses and System p

- IBM System p servers can host viruses.
- Only native scanning can find all viruses.
- Multiple OSes in partitions increases risk.
- Infected IBM systems may show no symptoms.

The Danger to Your Network

- Viruses on System p can attack other systems.
- File shares can be means of transmission.
- Undetected viruses can pass through Linux mail.
- Virus impact can spread across OSes.

A Native Solution

- Written specifically for System p.
- Provides protection for AIX and Linux.
- Native protection for your file server.
- Supports native mail scanning (on Linux).

Optimized for System p

- Fast scanning of up to 100 files per second.
- Provides task-based scanning.
- Offers scheduled and on-demand scanning.
- Native AIX and Linux user interfaces.

Powered by McAfee

- Utilizes McAfee's industry-leading engine.
- Heuristic scanning detects unknown viruses.
- Stops zero-day threats.
- Backed 365x24x7 by McAfee Avert® Labs.

Simple, Powerful Management

- Offers both GUI and command line interfaces.
- Commands can be used in shell scripts.
- Automatic update of DATs & engine.
- Manage using Unix/Linux cron scheduler.

STANDGUARD ANTI-VIRUS for x86 Linux

<http://antivirus.bytware.com/x/>

Modern virus threats and malicious code

represent a major threat to your corporate data and security. Today's multi-platform networks, Internet connectivity, and mobile computing mean that your Linux server or partition can host viruses and serve as the source of infection, spreading malicious code to other systems in your network. StandGuard Anti-Virus, developed in cooperation with McAfee, provides native protection for Linux on x86 systems.

Is Open Source Anti-Virus Right for You? (Article)

http://www.bytware.com/media/articles/open_source_av.html

Viruses and Linux

- Linux is not free from virus threats.
- Viruses, worms, and rootkits target Linux.
- Viruses can sit undetected on Linux boxes.
- Linux partitions can host and spread viruses.

The Danger to Your Network

- Viruses on Linux can attack your other systems.
- Samba file shares can be means of transmission.
- Undetected viruses can pass through Linux mail.
- Virus impact can spread across OSes.

A Native Solution

- Designed for Linux running on x86 processors.
- Support for Linux on System p also available.
- Native protection for your file server.
- Same powerful base as our IBM i & AIX products.

Optimized for Linux

- Fast scanning of up to 100 files per second.
- Provides task-based scanning.
- Offers scheduled and on-demand scanning.
- Native Linux user interface and management.

Powered by McAfee

- Utilizes McAfee's industry-leading engine.
- Heuristic scanning detects unknown viruses.
- Superior to open source solutions (e.g. ClamAV).
- Backed 365x24x7 by McAfee Avert® Labs.

Simple, Powerful Management

- Commands can be used in shell scripts.
- Easy configuration of any task from GUI or CLI.
- Manage using Unix/Linux cron scheduler.
- Automatic DAT and engines updates.
