

X-Audit

The Audit, Quality and Change Management module measures, compares and manages the quality, metrics and complexity of your IBM i applications

What's Inside

A description of X-Audit, the Audit, Quality and Change Management module in X-Analysis. The module provides detailed metrics analysis of all code and databases running on your IBM i, giving you the power to fully manage quality and change.

X-Audit Audit, Quality and Change Management

Measure, Compare and Manage the Quality, Metrics and Complexity of Your IBM i Applications

Problem Analysis data for XAN4CDXA - Total Problems: 491

Alert/Category/Object	Total	Description
Database Alerts	1	
File has Constraints	1	
Program Code Alerts	7	
Greatest depth of nested ELSEs exceeds 1	7	
Number of GOTOs exceeds 0	2	
Greatest depth of nested IF/DOs exceeds 5	1	
Greatest IF/DO block nbr of lines exceeds 48	25	
Greatest depth of nested loops exceeds 1	22	
Greatest subroutine nbr of lines exceeds 80	21	
Program has (non-excluded) hardcoded libraries	5	
FAXSHT		Immediate Faxshot
FXSLC		Special Faxshot
SECFOCLP		Security Report
WKCUSL		Customer Letter
WKCUSLV		Validity Checker for WKCUSL
Migration Alerts	3	
DDL Conversion Issues	4	
PF with non-unique key	9	

X-Audit gives you a highly detailed picture of your application and database metrics, including lists and locations of constraints, duplicates, unused files, multiple record formats, missing sources, unused subroutines and procedures and a host of database-related problems.

Audit, Quality and Change Management: Manage your IBM i applications by measuring and comparing a wide variety of metrics to gauge code complexity and quality.

Some Highlights:

- ▶ Program Complexity Metrics: low, medium and high complexity classification of programs
- ▶ Screen Display Complexity Metrics Analysis
- ▶ Database File Metrics Analysis
- ▶ Metrics Report Writer- Complete customizable report writer for building complexity and analysis reports
- ▶ Problem Analysis for design oddities, such as:
 - ▶ Database file with constraints defined
 - ▶ Duplicate logical files
 - ▶ Database files with FIFO/LIFO keywords in source
 - ▶ Joined logical files
 - ▶ And many more...
- ▶ Identifies unused Logical files, subroutines and procedures
- ▶ Audit Report - MS Word or PDF wizard generates structured reports of metrics and problem analysis results
- ▶ Link multiple repositories for combined analysis throughout all functions

YOU CANNOT IMPROVE WHAT YOU DO NOT MEASURE

Applications running on IBM i are typically large, complex and have been developed by a variety of programmers and analysts over several decades. Without an automated audit and analysis tool, understanding such applications is almost impossible, especially for new resources who have to take over maintenance and development. X-Audit, the Audit, Quality and Change Management tool of X-Analysis provides an

exhaustive breakdown of every aspect of your application portfolio. Without this linked, cross-referenced summary of your applications and databases, change management becomes a guessing game, and testing times and remediation cycles increase. In addition, without thorough knowledge of your applications, modernization of even small parts of the system becomes daunting, as complete impact is unknown.

X-Audit Audit, Quality and Change Management

Metrics Analysis is the Key to Improving Your Applications and Development

The complexity metrics feature of X-Audit enables managers of IBM i systems to measure, monitor and proactively manage complexity and changes to the applications.

Metrics Analysis Features

- ▶ Metrics calculated at both program and subroutine/procedure level
- ▶ All metrics exportable to Excel
 - ▶ Cyclomatic complexity
 - ▶ Halstead volume
 - ▶ Maintainability index
 - ▶ Number of source line statements in the program
 - ▶ Number of GOTOs or CABxx statements
 - ▶ Greatest nesting depth of IF/DO statements
 - ▶ Greatest number of statements within an IF/DO block of code
 - ▶ Greatest depth of nested DO/FOR loops
 - ▶ Greatest depth of nested ELSE statements
- ▶ Optionally transform the product into new languages with further use of transformation robots
- ▶ Test and deploy the iteration.

Audit for Problems, Complexity and Change

- ▶ Understand where the most complex code in the system resides and plan accordingly.
- ▶ Audit the difference between versions of a system at a design level—not just code.
- ▶ Be alerted to potentially harmful system conditions and defects before they cause production problems.
- ▶ Track changes in new versions of packaged applications to plan for refitting customizations.
- ▶ Externalize rules so they can be shared by multiple applications.
- ▶ Compare versions of your custom applications at different points in time to track where changes were deployed.

X-Audit Audit, Quality and Change Management

A Wide Range of Options and Functionality

In addition to problem analysis (pictured on page 2) and metrics analysis (described on page 3), X-Audit provides numerous functions to help manage your IBM i applications. Some of the highlights:

SPECIALIZED ANALYSIS

Allows you to design your own reports using the full metrics database in the defined system repository. This reporting provides a valuable way to measure and manage the quality and complexity of a code base. You can run one-off static reports or create DIFFERENCE REPORTS, in which you compare two or more versions of an application at different points in time to discover changes in:

- Source code
- Business rules
- Table and field definitions
- Table relationships

A screenshot of the 'Difference Analysis' window in X-Audit. The window title is 'Difference Analysis'. The main content area shows a table titled 'Difference Analysis for XAN4CDXC compared against XAN4CDXA'. The table has two columns: 'Heading/Object/Category' and 'Description'. The 'CHANGED' section is expanded, showing a list of objects and their descriptions. To the right of the main table, there is a smaller table with columns 'Class', 'Type', and 'Name'. Below the main table, there is another table with columns 'Class', 'Type', 'Name', 'Description', and 'PTF Change Date'.

Heading/Object/Category	Description
CHANGED	Changed Files
CNTACS	Contacts
+ FIELDS	Database File Fields
+ RELNS	Database File Relationships
+ CNTLF1	Global Contacts by Salesman
+ CNTLF2	Global Contacts by Name
+ CNTLF3	Global Contacts by Status
+ CNTLF4	Global Contacts by Prod & Status
+ CONDET	Contract Detail
+ CONHDR	Contract Header
+ CUSF	Sites
+ DIST5	Distributors
+ CUSFL7D	

Class	Type	Name

REFERENCED	*FILE	CUSFMAINTD	Customer Site Maintenance	19/03/10

SCREEN METRICS

Displays low, medium and high complexity classification of all the available screen functions.

BUSINESS PROCESS LOGIC METRICS

Displays business process logic data in metrics form - total lines, included lines, excluded lines, unmarked lines etc.

DATABASE SUMMARY

Provides access to a summarized database report for the entire cross-reference library. The report contains information related to files, their unique keys and other necessary file-related details.

X-Audit

Audit, Quality and Change Management:

Manage your IBM i applications by measuring and comparing a wide variety of metrics to gauge code complexity and quality.

X-Audit Summary of Functionality

- ▶ Program Complexity Metrics: low, medium and high complexity classification of programs
- ▶ Screen Display Complexity Metrics Analysis
- ▶ Database File Metrics Analysis
- ▶ Metrics Report Writer- Complete customizable report writer for building complexity and analysis reports
- ▶ Identifies unused Logical files, subroutines and procedures
- ▶ Audit Report – MS Word or PDF wizard generates structured reports of metrics and problem analysis results
- ▶ Link multiple repositories for combined analysis throughout all functions
- ▶ Builds a difference analysis between two versions of a system comparing business rules, database designs and relations and programs
- ▶ Builds a PTF impact analysis by comparing a PTF library repository with production repository
- ▶ Object Allocation report that lists all objects in the library with a brief description, mention of object type, attribute, its application area, if any, and the library to which the object belongs.

- ▶ Problem Analysis for design oddities, such as:
 - ▶ Database file with triggers, constraints or Select/Omits defined
 - ▶ Duplicate logical files
 - ▶ Database files with FIFO/LIFO keywords in source
 - ▶ Joined logical files
 - ▶ Source changed after file created
 - ▶ Journaled database files
 - ▶ Database files with multiple record formats, multiple members or no members
 - ▶ No database file for an existing source member, or no source for existing database file
 - ▶ No program object for an existing program source, or no source member for program object
 - ▶ Source member changed after program object created
 - ▶ References to Un-included Files Display
- ▶ Database Summary provides access to summarized information related to files, their unique keys and other file-related details
- ▶ Business Process Logic Metrics displays business process logic data in metrics form - total lines, included lines, excluded lines, unmarked lines etc.

About Fresche Solutions

As a leading expert in IBM i management and modernization, Fresche Solutions helps enterprise organizations transform their business to improve financial performance, increase market competitiveness, remove risk and add business value. Our team of experts has successfully completed hundreds of transformation projects within the most complex enterprise environments, helping organizations future-proof their business by modernizing their business processes, technologies, infrastructure, and methodologies. Committed to 100 percent customer satisfaction, Fresche's services and solutions span the complete IBM i modernization spectrum from concept to maintenance, and include Discovery Services, Modernization Solutions, and Application Management Services & Transformation. For more information about our company, visit us on the Web at www.freschesolutions.com

X-Analysis Professional is the foundation of the full X-Analysis toolset, a suite of productivity tools for your IBM i applications. Following is a brief description of the other modules in the suite:

X-Analysis Professional: The foundation tool, with all of the basic functionality.

CA 2E Analysis: Everything required to analyze and document CA 2E applications.

Application Process Mapping: Business rule and relational data model extraction and documentation of application processes and flows.

Application Modernization: RPG, COBOL and CA 2E (Synon) automatically converted to Java.

Audit, Quality and Change Management: Auditing of core application functionality - including design, quality and complexity - to identify and change problematic areas in the application.

Database Modernization: Automated conversion of DDS to DDL, including creation of constraints, long field names and views.

Data and Test Management: Analysis of data quality; data archiving, data subsetting and data masking. Test data automation and management.

Open Systems Analysis: Cross-referencing and documentation of Java, C#, PHP, VB/VB.NET and PowerBuilder.

How to get on board: X-Analysis products are available as a complete package or as individual modules. At Fresche Solutions, we work closely with you to assess your needs and recommend the best solutions. To get started, contact us using the information below:
